

Promoting A Strong Immune System For Your Dog

Organic Food

Feed a premium diet made of organic, high quality ingredients. Read labels and research manufacturers.

Alkaline Diet

An alkaline diet like Canine Caviar promotes oxygen in your pet's blood, a stronger immune system and more efficient internal organs.

Protein Rotation

Feed a single protein diet and rotate proteins with each bag. Each protein has a different amino acid profile which helps boost immunity.

Fun & Exercise

Physical and mental exercise are important so that your dogs feel their best and exercise the muscles in their body and their brain.

Love & Joy

Just like humans, dogs are healthier when they are happy. Stress is hard on the immune system so make sure your dog is well loved and not stressed.

Filtered Water

Keep your dog's water bowl full of fresh, clean filtered water to reduce exposure to chemicals in tap water.

Essential Oils

Essential oils often provide health benefits to pets and can help boost immunity and overall health.

Probiotics

If your food does not contain probiotics consider an all natural one like Herbsmith Microflora. Immunity and digestive health are linked.
